PATIENT'S NAME

AL YASIN, HAYA

JHH NUMBER

JFH
6/09/03 X F
F 7/07/03 P

8:00 am Called @ 0447 regarding Haya having a seizure that involved twitching of her face & upper extremities as well as perioral cyanosis w/ sats to 80%. Appropriately placed on non-rebreather by staff w/ O2 sats 100% HR 120's. She had been having seizures > 5mins, given rectal diazepam then and I was called @ 7mins. I arrived @ 10mins and seizure activity had resolved and patient appeared post-ictal, sleeping in no acute distress. Mom reports last sz was 6/18/03 until yesterday sz x 3mins during the day & this morning's activity. Tegretol level pending this am. will follow up w/ IBC & CMP & consider further work-up in am. O2 via nasal cannula PRN while recovering.
